For Crop Week Ending Sunday, August 19, 2007

Released August 20, 2007

Volume 07 Number 25

CROP INFORMATION

Days suitable for fieldwork: 6

Soil moisture supplies: 16% very short, 35% short, 37% adequate and 12% surplus

Field Crops Report

Very hot and dry conditions were once again experienced throughout the state last week. Dry weather aided the corn harvest, although some harvesting was hindered by a lack of trucks and storage space. Soybean conditions were generally good, although most fields could use some rain. Some soybean producers were spraying for stinkbugs and applying fungicides to prevent Asian Soybean Rust. Sorghum harvest reached 54%, well ahead of the 5-year average of 36%. The rice harvest was 55% complete, only slightly behind the 5-year average. Sugarcane producers were busy planting.

Fruits, Vegetables and Specialty Crops

Vegetable producers were working fall crops. Citrus producers were scouting trees for insects.

Livestock, Pasture and Range Report

Cattlemen were busy cutting hay. The hot, dry weather caused a decline in pasture conditions. Livestock conditions were generally good despite the extremely hot temperatures.
